DESCRIPTION

Your Society must comply with regulatory requirements regarding the building structure depending on its age. Electrical and Water systems need to be serviceable and operational in the event of a Fire. An Elevator AMC is extremely important to periodic inspection, repair and replacement of critical components to avoid the dangerous consequences of a failure.

Our services include liaising with various departments to conduct an inspection of the building and its systems. Their recommendations are used to rectify and bring these systems up to code so they comply with set standards.

A second inspection to confirm systems comply with regulations followed by certification is next. Once these systems are operational, we will assist with setting up a regular maintenance/service plan so that all equipment is functional and operating safely.
